## Tour IV: Activity #29 - Terrorism Management

Directions: Take some time to reflect on what you have learned; use additional paper as needed to complete the activities.

Select a specific biological agent that could be introduced into the community water supply. Use the information on the <u>www.state.ny.us/security</u> and <u>www.health.state.ny.us</u> websites to assist in completing this activity.

• Identify the primary, secondary and tertiary prevention measures that would be effective in eradicating the biological agent.

• Prepare a personal/family survival kit based on public health checklists; www.ready.gov is a good resource for this activity.
